Stavatti Releases New Machete Models for X-Plane V9

On Tuesday, April 21st, Stavatti released the latest models of the SM-27S/T Turboprop Machete, SM-27J/L Turbofan Machete and SM-47S/T Super Machete for X-Plane Version 9.2. Created in-house by Stavatti, these X-Plane models are an accurate, officially endorsed representation of Machete aircraft for use by the X-Plane community. The models are hosted on the Stavatti corporate website and are available for free download from a dedicated Machete X-Plane page. Downloads are available for non-commercial use only.

Laminar Research is a software company based in Columbia, South Carolina. Their flagship product is X-Plane, the world's most comprehensive, powerful flight simulator, with the most realistic flight model available for personal computers.

Stavatti Aerospace is an innovative enterprise focused on the design, development, and production of next generation manned and unmanned aerospace vehicles. Stavatti Aerospace is a division of Stavatti Heavy Industries, Ltd., a privately held American corporation.
