

# *SM-27AT*

## *A New Advanced Trainer*

## *For Iraq's New Air Force*

The SM-27AT is a dedicated Turbo-prop Advanced Trainer derived from the SM-27T. The SM-27AT will provide fast-jet, high performance fighter orientation while maintaining commonality with the existing T-6A fleet. Derived from a combat aircraft, as the need for Irregular Warfare grows, the SM-27AT can be converted from trainer to light attack roles, resulting in a true-combat ready COIN/FAC.

Powered by a Pratt & Whitney Canada PW123E Turboprop, the SM-27AT will have integrated avionics and displays provided by L-3 Communications, CMC Electronics, Honeywell, and Rockwell Collins, as well as Martin Baker MK.US16L ejection seats. Equipped with in-flight refueling and designed for 9-G maneuvering, the SM-27AT will provide greater value than any competitor.

As Iraq fields the F-16, the SM-27AT with its F-16 inspired cockpit and digital Fly-By-Wire flight control system, the SM-27AT will provide a seamless transition from trainer to Viper. Now under Development, the SM-27AT Machete Advanced Trainer is the High Performance, High Value Solution
