**No. of Sheets:** One

## Stavatti Establishes Buffalo Office

Christopher Beskar, Chairman and CEO of Stavatti Corporation, an aerospace vehicle manufacturer founded seven years ago in St. Paul, MN, announced the opening of a Western New York office. Stavatti is developing several air vehicles to meet current and future needs of US DoD and NATO countries.

Current designs include the F-26 STALMA, a single pilot, multi-role fighter, the SM-27S MACHETE COUNTER INSURGENCY platform, and unmanned reconnaissance air vehicles. Mr. Beskar selected Buffalo because of western New York's significant aerospace heritage and proximity to several aircraft component manufacturers, test facilities, and experienced labor pool.

The Buffalo office is managed by Dr. Robert Sugarman, head of RCS Performance Systems, Inc. and a board member and Director of Human Factors Engineering for Stavatti. RCS will be a supplier of documentation, manufacturing and customer training, and human factors design. The NY Stavatti office is located at 4455 Genesee St. in Cheektowaga. Stavatti is currently working with investors and marketing its products to US and foreign governments. While a workforce of several hundreds are anticipated, final sites around the country are still under consideration for future manufacturing phases. No applications are currently being accepted.
